                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GTATTATCGTGGCTTCTTTCTGCTGAGGACACATTGCAAGGCACAAGGAGAGATTTCTAAT 1876
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprisaing dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GGCAGTTCATTGATGGAGAGTGAAGTAAACCTGGACCGTTATCAAACAGCTTTAGAAGAA 1816

2020 2320 1900 2080 The present invention relates to an isolated nuclectide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a specifin gene, Hi and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a cytomegalovirus (CWV) promoter and a small polyA signal sequence GGCAGTTCATTGATGGAGGGGAGTGAAGTAAACCTGGACCGTTATCAAACAGCTTTAGAAGAA 1840 240 180 360 420 CAACAACATAAGGTGCTTCAAGAAGATCTAGAACAAGAACAAGAACAAGTCAGGGTCAATTCTCTC GCCCATCAGGGCCGGGTTGGTAATATTCTACAATTGGGAAGTAAGCTGATTGGAACAGGA GTÄTTATCGTGGCTTCTTCTGCTGAGGACACATTGCAAGGAGGAGAGTTTCTAAT GATGTGGAAGTGGTGAAAGACCAGTTTCATACTCATGAGGGGTACATGATGGATTTGACA AAATTATCAGAAGAAGAAACTGAAGTACAAGAGCAGATGAATCTCCTAAATTCAAGA TGGGAATGCCTCAGGGTAGCTAGCATGGAAAAAAAGCAAATTTACATAGAGTTTTAATG ACAAGGAAAATGGAGGAAGAGCCTCTTGGACCTGATCTTGAAGACCTAAAACGCCAAGTA ACAAGGAAAATGGAGGAAGAGCCTCTTGGACCTGATCTTGAAGACCTAAAACGCCAAGTA CAACAACATAAGGTGCTTCAAGAAGATCTAGAACAAGAACAAGTCAGGGTCAATTCTCTC GGCAGTTCATTGATGGAGAGTGAAGTAAACCTGGACCGTTATCAAACAGCTTTAGAAGAA GCCCATCAGGGCCGGGTTGGTAATATTCTACAATTGGGAAGTAAGCTGATTGGAACAGGA GATCTCCAGAATCAGAAACTGAAAGAGTTGAATGACTGGCTAACAAAAAACAGAAAAA Gaps ö Sequence 4990 BP; 1439 A; 1185 C; 1208 G; 1158 T; 0 U; 0 Other; DB 6; Length 4990; Indels ö 100.0%; Score 2001; 100.0%; Pred. useful for treating Duchenne muscular dystrophy (DMD) and Becker muscula dystrophy (BMD) in a mammalian subject. The present sequence is human dystrophin minigene delta3849 containing nucleocides 1.1668 (N-terminus, hinge H1 and rods R1, R2), 8059-10227 (rods R22, R33 and R24, hinge H4 and CR domain) and 11047-11058 (dystrophin last 3 amino acids) Sequence 3858 BP; 1189 A; 866 C; 905 G; 898 T; 0 U; 0 Other; Duery Match Duery Match Seet Local Similarity 93.0%; Pred. No. 0;	Matches 1860; Conservat 1 GGCAGTTCATTC 1000 GGCAGTTCATTCATTCATTCATTCATTCATTCATTCATTC	61 GTATTATCGTGGCTTCTTCTGCTGAGGACACATTGCAAGGAGAGATTTCTAAT 1060 GTATTATCGTGGCTTCTTTCTGCTGAGGACACATTGCAAGCACAAGGAGATTTCTAAT 121 GATGTGGAGGACACATTCTTTCTGCAGGACACATTGCAAGCACAAGGAGAGATTTCTAAT 121 GATGTGGAAGTGGTGAAAGACCAGTTTCATACTATCTAGGAGAGATTTGAA 121 GATGTGGAAGTGGTGAAAGACCAGTTTCATACTCATGAGGGGTACATGAGATTTGACA	1180 1180 241	301 IGGGAATGCCCAGGGTAGCCAGGAAAACAAAGCAATTACATAGAGTTTTAATG 1300 TGGGAATGCCTCAGGGTAGCATGGAAAACAAAGCAATTTACATAGAGTTTTAATG 1300 TGGGAATGCCTCAGGGTAGCTAGCATGAAAAAAAAAAATTACATAGAGTTTTAATG 361 GATCTCCAGAATCAGAAAAAAGATTGAAAAAAAAAAAAA	1360 GAICTCCAGAATCAGAAACTGAAAGAGTTGAATGACTGGCTAACAACAAAAACAGAAGAA 1419 421 ACAAGGAAAAGGGAAGAGCCTCTTGGACTGATCTTGAAGACCTAAAACGCCAAGTA 480 1420 ACAAGGAAAATGGAGAAGAGCCTCTTGGACCTGATCTTGAAGACCTAAAACGCCAAGTA 1479 481 CAACAACATAAGGTGCTTCAAGAAGACTGAACAAGAACAAGTCTTC 540 1480 CAACAACATAAGGTGCTTCAAGAAGAACAAGAACAAGGGCTCAATTCTCTC 540 1480 CAACAACATAAGGTGCTTCAAGAAGAACAAGAACAAGGGCTCAATTCTCTC 540 1480 CAACAACATAAAGTGCTTCAAGAAAGAACAAGAACAAAGACAACAATTCTTC 540	541 ACTOROATGGTGGTGGTGGTGGTGGTGGTGGTGGTGGTGGTGGTGG	661 TGGGTTCTTTTACAAGACCAGCCTGACCTAGCTCCTGGACTGACCACTATTGGAGCCTCT 720	1678

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1876
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGCAGTTCATTGATGGAGAGTGAAGTAAACCTGGACCGTTATCAAACAGCTTTAGAAGAA 1816
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1877 GATGTGGAAGTGGTGAAAGACCAGTTTCATACTCATGAGGGGTACATGAGGTTTGACA 1936
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) element. The dystrophin minigene operably linked to an expression control element, in a recombinant adeno-associated with an expression useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a cytomegalovirus (CMV) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1780 GGCAGTTCATTGATGGAGAGTGAAGTAAACCTGGACCGTTATCAAACAGCTTTAGAAGAA

invention also relates to a recombinant adeno-associated virus (AAV), comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) enhancer, a cytomegalovirus (CWV) promoter and a small polyA signal sequence

Sequence 5060 BP; 1449 A; 1217 C; 1234 G; 1160 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1119
The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or turophin genes. HI and H4 invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operable linkage with an expression element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is human dystrophy minigene delta413 contraining nucleotides 1-1922 (N-terminus, hinge H1 and rods R1, R2 and R3), 8059-1027 (rods R22, R23 and R24, hinge H4 and CR domain) and 11047-11058 (dystrophin last 3 amino acids)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1000 GGCAGTTCATTGATGGAGAGTGAAGTAAACCTGGACCGTTATCAAACAGCTTTAGAAGAA 1059
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1936
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2056
The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, H1 and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchanne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         990
                                                                                                                                                                                                                                                                                                                                                                     The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats, where n is an even number between 4-24, or a mucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polymucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a mini-dystrophin sequence of the
                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                               A composition for preparing therapeutic drugs, has a mini-dystrophin peptide comprising a specific number of spectrin-like repeat domains, a nucleic acid sequence encoding the mini-dystrophin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCTCCTGGACTGACCACTATTGGAGCCTCTCCTACTCAGACTGTTACTCTGGTGACACAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method directed to the use of spontaneous or automatic protein trans-splicing to join two or more peptides at junction site. This method involves expressing extein peptides having co-reacting portions of split intean attached to them, so that peptides will splice automatically under suitable conditions. The invention also provides methods for circumventing virion packaging size influtations in recombinant virus particle, by splitting a coding region for a protein to be delivered into two or more extein genes, which are packaged in separate virus particles and are co-delivered in a target cell for the expression and for subsequent trans-splicing to form the complete protein. In particular, the method is used for trans-splicing human dystrophin and in gene therapies of recombinant adeno-associated virus (AAA) particles that encode trans-spliced dystrophin, for treating diseases such as Duchenne muscular dystrophin, for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CCTAGAAGACTCCAAGGGAGTAAAAGAGCTGATGAAACAATGGCAAGACCTCCAAGGTGA 992
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats, where n is an even number between 4-24, or a nucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polymucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A composition for preparing therapeutic drugs, has a mini-dystrophin peptide comprising a specific number of spectrin-like repeat domains, or a nucleic acid sequence encoding the mini-dystrophin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GGTACCTACTCATAGATTACTGCAACAGTTCCCCCTGGACCTGGAAAAGTTTCTTGCCTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AGATGATGAATTAAGCCGGCAGCACCTATTGGAGGCGACTTTCCAGCAGTTCAGAAGCA 1292
                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to an isolated nucleotide sequence encoding a dystrophin minique. The minique comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minique operably linked to an expression control element. The dystrophin minique in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is human dystrophin protein coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                 New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      872

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         932
                                                                                                                                                                                                                                        The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats domains to more than n spectrin-like repeats, where n is an even number between 4-24, or a nucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscale disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a human dystrophin polynucleotide sequence used in the creation of the mini-dystrophin peptides of the
                                                                                                                    A composition for preparing therapeutic drugs, has a mini-dystrophin peptide comprising a specific number of spectrin-like repeat domains, or a nucleic acid sequence encoding the mini-dystrophin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAAGTGGAACTTCGGAAAAGTCTCTCAACATTAGGTCCCATTTGGAAGCCAGTTC

                                                                                                                                                                                                                                                                                                                                                                                              932
       peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats, between a more than n spectrin-like repeats, where n is an even number between x a nucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy invention
